Local-First | Task 03

Task

Remove duplicates

Write a Python function that removes duplicate values while preserving their original order.

Example

Input: [3, 1, 3, 2, 1]

Output: [3, 1, 2]

Starter code

```
def unique_values(values):  
    pass
```

Response

Copy code

Track seen values and keep their first occurrence.

```
def unique_values(values):  
    seen = set()  
    result = []  
    for value in values:  
        if value not in seen:  
            seen.add(value)  
            result.append(value)  
    return result
```
